Thank you for installing Barcode & OCR Package - Intelligent Version. This package provides you with the industry standard PCL based Barcode and OCR printing function add-on to your Multi-Functional Products - MFPs -.

For most of the postal barcodes, the size and width specifications are fixed, but for the other types of barcodes the following definitions can be made, using a font-like ESC sequence:

- Any height, up to 999pt
- Any width, and if the specifications allow it, in any bar/space width ratio
- Optional readable text using 5 different fonts, positioned below or on top of the bars. In both cases, the text can be printed outside, half- or fully-embedded, either on top or below the barcode.
- The checksum calculation is done fully automatically.

**For printing:** In IBS Control Center (IBS-CC) go to "Test" and select "Standard IBS Test job".

**For viewing:** To look at the file source, you may load the file \IBS\test files\ibs\_test.prn into any ASCII editor, like DOS EDIT. Then you have quite a nice sample of how barcodes can be specified.
